

Working Prototype Known Problems Report

Product Name: Deforestation Detector

Team Name: Deforestation Detector

Team Members:

Donnovan Henry

Sam Edwards-Marsh

John Beresford

Geo Ochoa

Chris Sterza

Date: 3/8/22

Functions that aren't working properly:

- Learn More Nav Click
 - **Action that causes fault:** Clicking the “Learn More” navigation button when it's positioned over a clickable map element opens up the Label Info page instead of the intended About page.
 - **Location of fault:** Click handlers.
 - **Possible Action for removal:** More intentional capturing of click handlers.

- About Page Close Click
 - **Action that causes fault:** Clicking on the close button from the About page when the cursor is over a clickable map element immediately opens up that element's Label Info page.
 - **Location of fault:** Click handlers.
 - **Possible Action for removal:** More intentional capturing of click handlers.

- About Page Scrolling

- **Action that causes fault:** Opening a label info page before opening the About page temporarily leaves a lot of empty space on the About page. This makes the page look empty.
 - **Location of fault:** HTML and CSS formatting for the About page.
 - **Possible Action for removal:** Refactor About Page structure.
-
- Clickable Hidden Elements
 - **Action that causes fault:** Clicking and holding where certain text from the Loading and Landing pages are causes the cursor to interact with them even when the pages are hidden. This can impede map navigation.
 - **Location of fault:** CSS formatting for the Loading and Landing pages.
 - **Possible Action for removal:** Find out where those elements are gaining touch/pointer events and remove them from the CSS.
